

Biodiversity & Billy B.

This is a new recording of seventeen original songs that represent, through diverse rhythms and styles, some of the amazing diversity of life on our planet.

Biodiversity

Bio-Bio-Biodiversity,
all life living in this community.
Bio-Bio-Biodiversity,
all around and inside you and me.
Bio-Bio-Biodiversity,
spaces, species, and the family tree.
Bio-Bio-Biodiversity,
so important to the world community.

I want, I want, I want whales in the oceans.
I want rhinos living free.
I want all forests growing.
I want Biodiversity.

We need rain forest medicine.
We need coral in the sea.
We need flower pollination.
We need Biodiversity.

Right Now!

It's a big world we discover,
when we go out every day.
All the life forms live together,
interacting many ways.

Bees need flowers.
Flowers need bees.
That's pollinating power
fruit around seeds.

CHORUS

It's a forest we discover,
when we're there among the trees.
All the beetles and the mushrooms
and the worms under the leaves.

In the oceans, fish swim and feed
among the coral habitat they need.

CHORUS
